

A large inflatable screen is set up in a city at night, displaying a bright white image. A large crowd of people is sitting on colorful beanbag chairs in front of the screen. In the background, several tall, illuminated skyscrapers are visible against the dark night sky. The scene is lit with a mix of city lights and the glow from the screen.

AIRSCREEN

THE BEAUTY OF
THE INFLATABLE SCREEN

AIRSCREEN 100ft x 60ft (30m x 18m) · Brussels, Belgium · Drive-in cinema

AIRSCREEN REMAINS THE WORLD'S LEADER IN

GIANT INFLATABLE SCREENS.

Technology InAVation Awards

When we invented AIRSCREEN in 1994, the first inflatable screen in the world was born. We knew just by standing close to our own product: This was a huge idea – gigantic in size and yet quick and simple to install. It takes your breath away when you see an AIRSCREEN being inflated in front of you. And then, watching a good movie under the stars on it – pure beauty!

The reason why we do what we do is simple: Because we love movies and we love outdoor cinema. But it's not only us. Our worldwide network of AIRSCREEN experts help us to offer you expertise and service right where you are. No wonder why AIRSCREENS played important roles in film festivals and premieres from Venice to Mexico, from Berlin to New York, from Cape Town to Sydney. Now – about 20 years after the first

AIRSCREEN inflation – we are proud to have customers in more than 75 countries around the globe.

This idea just doesn't stop! So many more dreams are waiting to come true with AIRSCREEN. We are looking forward to the years to come and your great ideas that need to be seen in a larger frame.

AIRSCREEN'S UNIQUE FEATURES

Ground anchors made of steel

Noise reducing blower flight case

Perfect set-up on grass location

How can we set up AIRSCREENS indoors even in opera houses and concert halls? Because our blowers are noise capsuled to a degree that it's hard to hear if they are on or off. Even further, the airtight version of the AIRSCREEN does not need a running blower during operation – so you love what you'll hear: Nothing!

Our patented system of the wind breaking back shield, tensioning straps and counter weights guarantee perfect fixation of an AIRSCREEN up to 24 mph or 38 km/h wind speed. And if winds get even stronger other (non-inflatable) structures may put you and your audience at risk. With AIRSCREEN, you can quickly deflate the frame and everything is safe.

All AIRSCREEN frames do not bow or bend in wind. This is because AIRSCREEN frames are produced utilizing

a special high frequency (hf) welding method. For you this means a frame that does not leak, that does not tear and that is therefore virtually as rigid as steel.

The materials we use both for the frame and the screen surface are flame-retardant and tested against toxic ingredients by German and European Union institutions. Because we love our planet as much as you do!

We take pride in social responsibility for the workers and engineers because only the right craftsmanship in combination with carefully chosen materials makes AIRSCREEN the ultimate inflatable movie screen.

And not to forget: We know our product inside out! Nearly all components that make an AIRSCREEN are made in Germany. Our 2 year warranty underlines this.
